Dhanush Annoji

(404) 660-7623 | dhanushannoji@gmail.com | LinkedIn | github.com/2u5hi | Portfolio| US Citizen

Education

Georgia State University — Atlanta, GA
B.S. Computer Science | GSU Honors College — *Aug. 2023 – May 2026*

Experience

Rising Force Direct — Aug. 2026 – Present
Account Manager — *Atlanta, GA*

- Promoted to leadership in first week, clearing the company Alpha standard of $1,700+ in sales
- Delivered sales pitches to consumers for AT&T Fiber and Premium 2.0

NGAO Security LLC — Apr. 2025 – Aug. 2025
Web Developer Consultant — *Atlanta, GA*

- Rebuilt the company's client-facing website from scratch in HTML, CSS, and JavaScript, redesigning the service request workflow so clients can find a service and submit a request in fewer steps
- Restructured the site's page hierarchy and semantic markup for search indexing and SEO, turning requirements from stakeholder sessions into features shipped in Agile iterations

Projects

Cloud-Based WMS with Agentic AI | *Java, Spring Boot, MySQL, Python, React, AWS, Terraform* — Github

- Built a warehouse management system with location-level inventory on an append-only ledger, host order import, wave planning with allocation and demand replenishment, and worker task execution gated by equipment certifications
- Engineered for correctness under concurrency with database-enforced invariants, deadlock-free ordered row locking, idempotent commands, and contention-safe task claiming, verified by 240+ automated tests including property-based and 50-way concurrent tests
- Integrated a Claude-powered operations agent (Python/FastAPI) that calls WMS tools to diagnose blocked waves and files fixes a supervisor must approve, with role-based access enforced server-side and keyless Claude access via AWS workload identity federation
- Deployed serverless on AWS (Lambda container images, RDS, CloudFront) with Terraform and GitHub Actions CI/CD over OIDC, including budget alerts and an automatic cost kill switch

TravelMS | *Angular, TypeScript, Node.js, Express, MySQL, REST* | GSU Capstone, Team Lead — Github

- Led a student engineering team building a full-stack travel management platform, running Agile sprints and owning architecture and database schema decisions captured in sprint documentation
- Designed a normalized MySQL schema across 5+ entity types enforcing referential integrity, and defined the REST API contract between an Angular/TypeScript frontend and a Node.js/Express backend

AI Podcast Clipper | *Next.js, TypeScript, Python, Modal, Inngest, S3* — Github

- Architected and deployed a multi-service pipeline turning YouTube videos into vertical, captioned clips: a Next.js frontend (Vercel), a Python GPU backend (Modal), and an Inngest queue between them, decoupled via an S3-key contract
- Built the AI processing chain on a serverless L40S GPU: WhisperX transcription, Gemini moment selection with schema enforcement and model fallback, active-speaker tracking, and FFmpeg vertical reframing with burned-in captions
- Hardened the queue for production with bearer-token auth on the GPU endpoint, per-user concurrency limits to cap GPU cost, and a recovery path for jobs that finish after the request window closes

JPMorgan Chase | **Midas Core** | *Java, Spring Boot, Kafka, Spring Data JPA, H2, REST* — Github

- Built a financial transaction processing service consuming real-time Kafka events, validating accounts and balances, and persisting records to an H2 database via Spring Data JPA
- Introduced atomic transaction management via Spring `@Transactional`, ensuring 100% consistency of sender/recipient balance updates and eliminating partial-write failures
- Integrated an external Incentive REST API via RestTemplate, decoupling incentive logic from core processing

Skills

Project Management: Agile/Scrum sprint planning, requirements gathering, architecture and schema ownership, API contract definition, technical documentation
Technical: Python, JavaScript/TypeScript, Java, SQL; React, Next.js, Angular, Node.js, FastAPI, Spring Boot, Spring Security; Git, Docker, CI/CD, Terraform, AWS (Lambda, RDS, CloudFront, S3, IAM), Kafka, MySQL/Postgres
Certifications: Microsoft MTA: Introduction to Programming Using Java; Microsoft MTA: Software Development Fundamentals

Leadership & Activities

Head of Alumni Relations, Health & Safety Rep., VP Committee – Alpha Tau Omega, Eta Beta Chapter, Georgia State University (Aug. 2023 – May 2026); organized 10+ events per semester and managed schedules for 50+ members

Member, National Student Data Corps (NSDC) – Georgia State University (Aug. 2024 – May 2026); applied data engineering techniques in Python on chapter projects
